Garde S, Panchal CJ, Baijal-Gupta M, Fraser J, Kadhim S;

WPI; 2002-471401/50.

New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.

Claim 2; Page 93-94; 185pp; English.

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PID), human seminal plasma inhibin (HSPI) and betamicroseminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PTP), human seminal plasma inhibin (HSP1) and beta microseminoprotein (betg-MSP) and analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is the human PSP94 protein
                                                                                                                                                                                                                                                                                                                                                                                                                    Cancer; human; PSP94; prostatic inhibin protein; PIP; HSPI; beta-MSP; beta-microseminoprotein; human seminal plasma inhibin; analogue; prostates secretory protein of 34 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer; benign prostate hyperplasia; cytostatic.

PSP-94 is useful for treating a patient suffering from hypercalcaemia of malignancy arising from carcinomas, prostate and breast cancer. The PSP-94 is also useful for reducing and reducing control normone related peptide (PTHFP) levels in a patient in need and reducing the development of skeletal metastasis. The PSP-94 is also used for the manufacture of a pharmaceutical composition for the treatment of hypercalcaemia of malignancy and/or skeletal metastasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             90

New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.

Claim 2; Page 73-74; 185pp; English.

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin in peptide (PIP), human seminal plasma inhibin (HSPI) and beta-microseminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

Recombinate prostate secretory protein-94 (PSP-94).

Cytostatic; prostate secretory protein-94; PSP-94; hypercalcaemia of malignancy; carcinoma; prostate cancer; breast cancer; parathyroid hormone related peptide; PTHrP; skeletal metastasis.

The present invention relates to the use of prostate secretory protein-94 (PSP-94; the present sequence) for treating a patient suffering from hypercalcaemia of malignancy. PSP-94 is useful for treating a patient suffering from hypercalcaemia of malignancy arising from carcinomas, prostate and breast cancer. The PSP-94 is also useful for reducing parathyroid hormone related peptide (PTHrP) levels in a patient in need and reducing the development of skeletal metastasis. The PSP-94 is also used for the manufacture of a pharmaceutical composition for the treatment of hypercalcaemia of malignancy and/or skeletal metastasis Use of prostate secretory protein-94 for treating hypercalcemia of malignancy and reducing skeletal metastasis arising from carcinomas, prostate and breast cancers. The present sequence is a polypeptide encoded by one of a large number of S' ESTS derived from mRNAs encoding secreted proteins. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dr primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtained, Inarch cONAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures. Claim 13; SEQ ID NO 7807; 71pp + Sequence Listing; English.

and treatment of CDNA libraries Novel polypeptides and nucleic acids obtained from cDNA libra prepared from various human tissues, for diagnosis and treatm cancer, neurological, inflammatory, and autoimmune disorders.

Example 3; SEQ ID NO 236; 107pp; English.

The invention relates to novel isolated human secreted polypeptides (I) and (II) are useful for treating and polynucleotides (II). (I) and (II) are useful for treating inflammatory conditions such as arthritis, nephritis, croin, a disease, inchammia-reperfusion injury, shock, sepsis, immune responses, and is involved in increasing haematopoiesis, stem cell survival, bone growth and remodeling. (I) (II) and modulators of (II) are useful for companies of prophylaxis or treatment of one or more cancers. (II) is also useful for the polypeptide as well as for studying modulators of the polypeptides. (I) induces the proliferation of neural cells and regeneration of nerve and brain tissue and is useful for the treatment of central and parint prisue and is useful for the treatment of central and parint parints. In addition, (I) is involved in cinematoric activity, regulation of haematopoises and is useful for treating myeloid activity, regulation of haematopoises; and amyorrophic lateral carliage the conditions. Out the disorders such as thrombocytopenia and for regeneration of bone, cartilage tendon, ligament and/or nerve and for regeneration of bone, cartilage tendon, ligament and/or nerve and for regeneration of bone, cartilage tendon, ligament and/or nerve and for regeneration and treatment of lung or liver fibrosis, or periodontal disease. Furthermore, (I) is also useful for gut protection or regeneration and treatment of lung or liver fibrosis, or fungal infections, autoimmune disorders e.g. multiple sclerosis, creations and conditions, such as asthma or other reginatory problems. In addition, (I) affects biorhythms or circadian cycles of thythms.

In addition, (I) affects biorhythms or circadian cycles of thythms.

In addition, (I) affects biorhythms or circadian cycles of thythms.

In addition, (I) affects biorhythms, and an art as an antigoric effects, immunofection to raise an indiageaic effects or other pain reducing amino acid sequences of the invention

```
The present invention relates to novel prostate-specific proteins (PSP) and their coding sequences. The PSPs and their coding sequences are useful for stimulating an immune response in a patient, or for treating prostate cancer in a patient and for determining, detecting or diagnosing the presence of a cancer in a patient. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New prostate-specific proteins and genes, useful in gene therapy, particularly for stimulating an immune response in a patient, or treatin prostate cancer in a patient, as well as for diagnosing prostate cancer

the cancerous state of prostate cells. Also disclosed is a method of assessing whether a patient is afflicted with prostate cancer. The method of the invention involves assessing whether a patient is afflicted with prostate cancer by comparing the level of expression of a marker in a patient sample and the normal level of expression of the marker in a control non-prostate cancer sample, where a significant increase in the level indicates that the patient is afflicted with prostate cancer. Nucleic acids of the invention are useful for diagnosing or treating prostate cancer, and may be useful in gene therapy. Sequences given in ADB75177-ADB7561 represent marker cDNA and proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form at directly from WIPO at

The invention relates to an isolated polypeptide comprising no more than 11-542 amino acids of ADB13563 comprising a sequence ADB14487. The peptides comparise a fragment ADB13563 of that contain naturally processed to peptides comparise a fragment ADB13563 of that contain naturally processed a leader a class I major histocompatibility complex (MHC) and of 48 disclosed as new. Also included are nucleic acids councilly, one of 648 disclosed as new. Also included are nucleic acids councilly the proteins and peptides, expression vectors, a host cell cransformed with the vector, an isolated antibody (or antigen binding the presence of a cancer in a patient (comprising contacting a patient (comprising the peptide, betteting a patient (comprising the amount of polypeptide to a predetermined cutofic appearing as ADB1358, detecting the amount of polypeptide to a predetermined cutofic appearing the proteins. Stimulating or expanding T cells specific for a tumour protein comprising contacting T cells specific for a tumour protein comprising contacting T cells with the peptides or the isolated T cell population, treating prostate cancer in a patient and treating a prostate cancer in a patient and treating a composition comprising the presence of a nucleic acids, antibodies or compounds, determining the presence of a cancer in a patient with the peptides or antigen presenting cluster of differentiation (CD4+) and/or CD8+ T cells isolated from a patient with the peptides or antigen presenting cluster of differentiation (CD4+) and administering the presence of cancer in a patient. The peptides, nucleic acids encoding, or antigen-presenting cells expressing them uncleic acids encoding, are used to antigen-presenting cells expressing the nucleic acids are timed to expand T cell specific for a tumour protein, T cell populations or antigen presenting cells are used to stimulate an immune response or treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polypeptide for use in a vaccine for stimulating an immune response, or for treating or diagnosis cancer, preferably prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 34; Page; 101pp; English.

The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, prostate cancer, prostate cancer antigen, detection, diagnosis, neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular; vulnerary, gastrointestinal, nephrotropic, antilnfective, gynaecological, antibacterial, gene therapy, neural, immune, reproductive, renal; gastrointestinal, pulmonary, cardiovascular, proliferative disorder; wound, infectious disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Prostate cancer associated gene sequences, referred to as prostate cancer antigens, useful for treatment, prevention, and diagnosis of disorders
prostate cancer in a patient. The present sequence is a prostate specific protein of the invention. Note: Except where otherwise indicated, the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at segdata.uspto.gov/sequence.html?DocID=20030185830.
                                                                                                                                                                                                                                                                       51 BWQTDNCETCTCYETEISCCTLVSTPVGYDKDNCQRIFKKEDCKYIVVEKKDPKKTCSVS 110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSP1) and betaminoroseminoprotein (beta-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention
s, wounds, and infectious diseases. AAF16506 to AAF16514 to represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSP1) and betamicroseminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of PSH. The preparation can also be used to treat patients with diseases characterised by elevated freels of follicle stimulating hormone (FSH). The PIP and its analogues inhibit tumour growth and destrease FSH levels without adversely affecting testosterone levels. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and betamicroseminoprotein (bets-MSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
            prostate secretory protein of 94 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer; benign prostate hyperplasia; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EWQTDNCETCTCYETEISCCTLVSTPVGYDKDNCQRIFKKEDCKYIVVEKKDPKKTCSVS

Fraser J, Kadhim S; Garde S, Panchal CJ, Baijal-Gupta M,

WPI; 2002-471401/50.

New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.

Claim 1; Page 74; 185pp; English.

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibit peptide (PIP), human seminal plasma inhibit (ISPI) and betamicroseminoprotein (beta-NSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

```
The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and betaminosorotein (bets-MSPI). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, adometrial, ovarian or other cancers of epithelial secretion, or being prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The
                                                                                                                                                     Cancer, human; PSP94; prostatic inhibin protein; PIP; HSPI; beta-MSP; beta-microseminoprotein; human seminal plasma inhibin; analogue; prostate secretory protein of 94 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer;
                                                                                                               Human prostate secretory protein of 94 amino acids PSP94 analogue #6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.
                                                                                                                                                                                                                                           benign prostate hyperplasia; cytostatic

                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the use of prostate secretory protein-94 (PSP-94; ABR562224) for treating a patient suffering from hypercalcaemia of malignancy. PSP-94 is useful for treating a patient suffering from bypercalcaemia of malignancy arising from carcinomas, prostate and breast cancer. The PSP-94 is also useful for reducing parathyroid hormone related peptide (PTHrP) levels in a patient in need and reducing the development of skeletal metastasis. The PSP-94 is also used for the manufacture of a pharmaceutical composition for the treatment of hypercalcaemia of malignancy and/or skeletal metastasis. The present sequence is a peptide fragment of PSP-94, used to illustrate the

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PS594, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and betaminatoroseminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention
                                                                                                                                                                                                                                                                                                                          New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.
                                                                                                                                                                                                                                                     Garde S, Panchal CJ, Baijal-Gupta M,

٦,

nseful New human prostate secretory protein of 94 amino acids, use: inhibiting growth of e.g. tumor, prostatic adenocarcinoma, gastrointestinal, breast, endometrial, and ovarian cancers.

Claim 2; Page 94; 185pp; English.

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSRI) and betaminatoreseminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, candometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and betaminosceminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal acancer, braast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The

               Human
```

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSP1) and beta-microseminoprotein (Bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarrian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The
                                                                                                                                                                                                                                                                                                                                                             Cancer; human; PSP94; prostatic inhibin protein; PIP; HSPI; beta-MSP; beta-Mscoseminoprotein; human seminal plasma inhibin; analogue; prostate secretory protein of 94 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer; benign prostate hyperplasia; cytostatic.
                                                                                                                                                                                                                                                                                                                                     Human prostate secretory protein of 94 amino acids PSP94 analogue #11.
                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.
   FSH.

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibit no peptide (PIP), human seminal plasma inhibin (HSPI) and beta-microseminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal acancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention
                                                                                                                                                                          Cancer; human; PSP94; prostatic inhibin protein; PIP; HSPI; beta-MSP; beta-microseminoprotein; human seminal plasma inhibin; analogue; prostate secretory protein of 94 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer; benign prostate hyperplasia; cytostatic.
                                                                                                                                            Human prostate secretory protein of 94 amino acids PSP94 analogue #60.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Baijal-Gupta M, Fraser J, Kadhim S;

New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.

Claim 2; Page 78; 185pp; English

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSRI) and betamineroseminoprotein (beta-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarchoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.

Claím 2; Page 104; 185pp; English.

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and becaming posseminoprotein (Pers-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

The preparation can also be used to treat patients with diseases characterised by elevated levels of follicle stimulating hormone (FSH). The PIP and its analogues inhibit tumour growth and descrase FSH levels without adversely affecting testosterone levels. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                       Prostatic inhibin peptide, cancer, adenocarcinoma, breast cancer, hyperplasia, PIP, follicle stimulating hormone, PSH, tumour, inhibition, prostate cancer, gastrointestinal tract.

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSP1) and betaminatorseminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is the human PSP94 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, cytostatic, prostate secretory protein-94; PSP-94; hypercalcaemia of malignancy, carcinoma, prostate cancer; breast cancer; parathyroid hormone related peptide; PTHrP; skeletal metastasis.
                                                                                                                beta-microseminoprotein, human seminal plasma inhibin, analogue, prostate secretory protein of 94 amino acids, prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer; benign prostate hyperplasia; cytostatic.

Newman

Panchal CJ,

The present invention relates to the use of prostate secretory protein-94 (PSP-94; the present sequence) for treating a patient suffering from hypercalcaemia of malignancy. PSP-94 is useful for treating a patient suffering from hypercalcaemia of malignancy arising from carcinomas, prostate and breast cancer. The PSP-94 is also useful for reducing parathyroid hormone related peptide (PTHrP) levels in a patient in need and reducing the development of skeletal metastasis. The PSP-94 is also used for the manufacture of a pharmaceutical composition for the treatment of hypercalcaemia of malignancy and/or skeletal metastasis

```
The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic hinhibin peptide (PIP), human seminal plasma inhibin (HSPI) and betamicroseminoprotein (Dets-MSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                             Gaps

Use of prostate secretory protein-94 for treating hypercalcemia of malignancy and reducing skeletal metastasis arising from carcinomas, prostate and breast cancers. 

Disclosure; Page 35-36; 61pp; English.

The present invention relates to the use of prostate secretory protein-94 (PSP-94; the present sequence) for treating a patient suffering from typercalcaemia of malignancy. PSP-94 is useful for treating a patient suffering from hypercalcaemia of malignancy arising from carcinomas, prostate and breast cancer. The PSP-94 is also useful for reducing parathyroid hormone related peptide (PTH-P) levels in a patient in need and reducing the development of skeletal metastasis. The PSP-94 is also used for the manufacture of a pharmaceutical composition for the treatment of hypercalcaemia of malignancy and/or skeletal metastasis

The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dr primed cDNA libraries. Such ESTs are not well suited for isolating cDNA perduences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely therefore be used to obtain full length cDNAs and genomic DNAs. S' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                            Human, 5' EST; expressed sequence tag; secreted protein, cDNA isolation, gene therapy, chromosome mapping.
                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for

The invention relates to novel isolated human secreted polypeptides (I) and (II) are useful for treating and polymucleotides (II). (I) and (II) are useful for treating conditions such as arthritis, nephritis. Crohn's disease, ischamatory conditions such as arthritis, nephritis. Crohn's disease, ischamatory conditions such as arthritis, nephritis. Crohn's disease, involved in increasing haematopoiesis, stem cell survival, bone growth and remodeling. (I). (II) and modulators of (II) are useful for prophylaxis or treatment of one or more cancers. (II) is also useful for creating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides. (I) induces the proliferation of neural cells and regeneration of nerve and brain tissue and is useful for the treatment of central and continuous system diseases and neuropathies, such as Alzhelmer's, contivity, regulation of haematopoiesis and is useful for treating myeloid or creating orders, platelet disorders such as thrombocytopenia and for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, and in tissue repair, healing of burns, incisions, ulcers, or lymphylory and in tissue repair, healing of burns, incisions, ulcers, for treating osteoporosis, osteoarthitis, bone degeneration and treatment of lung or liver fibrosis, or periodontal disease. Furthermore, (I) is also useful for gut protection or regeneration and treatment of lung or liver fibrosis, or periodontal disease. Furthermore immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders en multiple sclerosis, allergic theumatoid arthritis, diabetes mellitus, myasthenia gravis, allergic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ď.

reactions and conditions, such as asthma or other respiratory problems. In addition, (1) affects biorhythms or circadian cycles of rhythms, fertility, metabolism, catabolism, anabolism, storage or elimination of dietary fat, lipid, protein, carbohydrate, vitamins, minerals, provides analgesic effects or other pain reducing effects, immunoglobulin like activity and can act as an antigen in a vaccine composition to raise an immune response. AAU28020-AAU28395 represent novel human secreted protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New prostate-specific proteins and genes, useful in gene therapy, particularly for stimulating an immune response in a patient, or treating prostate cancer in a patient, as well as for diagnosing prostate cancer in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to novel prostate-specific proteins (PSP) and their coding sequences. The PSPs and their coding sequences are useful for stimulating an immune response in a patient, or for treating prostate cancer in a patient and for determining, detecting or diagnosing the presence of a cancer in a patient. The present sequence was used to illustrate the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                χ;

The invention relates to newly discovered cancer markers associated with the cancerous state of prostate cells. Also disclosed is a method of assessing whether a patient is afflicted with prostate cancer. The method of the invention involves assessing whether a patient is afflicted with prostate cancer. The method of the invention involves assessing whether a patient is afflicted with prostate cancer by comparing the level of expression of the marker in a control non-prostate cancer sample, where a significant increase in the level of expression of the marker in the patient sample and the normal control non-prostate cancer.

Nucleic acids of the invention is afflicted with prostate cancer.

Nucleic acids of the invention are useful for diagnosing or treating prostate cancer, and may be useful in gene therapy. Sequences given in ADB75177-ADB7531 represent marker cDNA and proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               treating prostate

The invention relates to an isolated polypeptide comprising no more than 11-542 amino acids of ADB13563 comprising a sequence ADB14487. The peptides comprise a fragment ADB13563 of that contain naturally processed T-cell epitopes for 3 class I major histocompatibility complex (MHC) alleles. ADB13563 is a polypeptide encoded by a human prostate specific CDNA, one of 648 disclosed as new. Also included are nucleic acids
                                                                                                               Human; prostate specific cDNA, cytostatic; immunostimulant; gene therapy; cell therapy; vaccine; T-cell epitope; class I major histocompatibility complex allele; MHC; prostate cancer; tumour; antigen presenting cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polypeptide for use in a vaccine for stimulating an immune for treating or diagnosis cancer, preferably prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              encoding the proteins and peptides, expression vectors, a host cell transformed with the vector, an isolated antibody (or antigen binding fragment) that specifically binds to the protein or peptide, detecting
                                                                                           Human prostatic secretory protein (PSP).
             ADB14453 standard; protein; 114 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 34; Page; 101pp; English.

```
the presence of a cancer in a patient (comprising contacting a patient cample with a binding agent that binds to the peptides or a polypeptide to a appearing as ABD18558, detecting the amount of polypeptide to a predetermined to the agent and comparing the amount of polypeptide to a predetermined cutoff value to determine the presence of cancer), a fusion protein comprising the appearing or proteins, stimulating or expanding T cells specific for a tumour protein comprising contacting T cells with the specific for a tumour protein composition comprising the peptides, concer in a patient and treating a composition comprising the peptides, concer in a patient and treating prostate cancer in a patient with the peptides or antigen presenting cells that express the peptides so that the T cells proliferate, and administering the concertion contact in a patient. The peptides for an oligonucleotide that hybridises to nucleic acid encoding them), is used to detect the presence of cancer in a patient. The peptides, nucleic acids encoding, or antigen presenting cells expressing the nucleic acids are used to antigen set in a patient. The peptides, nucleic acids, antibodies, fusion proteins, T cell populations or antigen contact in a patient when a tenneur protein. The peptides, nucleic acids, antibodies, fusion proteins, T cell populations or antigen contact in a patient when a number of a profess antigen when the contact in a patient of a minimum response or treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, prostate cancer, prostate cancer antigen, detection, diagnosis, neuroprotective, cytostatic, cardicactive, immunomodulatory, muscular; vuncaray, gastrointestinal, nephrotropic, antiinfective, gynaecological, antibacterial, gene therapy, neural, immune, reproductive, renal, gastrointestinal, pulmonary, cardiovascular; proliferative disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           prostate cancer in a patient. The present sequence is a prostate specific protein of the invention. Note: Except where otherwise indicated, the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ..

Prostate cancer associated

Homo sapiens 30-AUG-2002 25-APR-2002 invention AA017994; Garde S, Human RESULT 13 à d

ö AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, evrostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antinifective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to ssociated gene sequences, referred to as prostate cancer for treatment, prevention, and diagnosis of disorders Cancer; human; PSP94; prostatic inhibin protein; PIP; HSPI; beta-MSP; beta-microseminoprotein; human seminal plasma inhibin; analogue; prostate secretory protein of 94 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer; secretory protein of 94 amino acids PSP94 analogue #83. Gaps The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers. ..                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and betaminorcesminoprotein (Pets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention
inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and beta-
microseminoprotein (bets-MSP)). The analogues are useful for inhibiting
growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal
cancer, breast cancer, endometrial, ovarian or other cancers of
spithalial secretion, or benign prostate hyperplasta and for treating
patients with a disease characterized by elevated levels of FSH. The
present sequence is an analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cancer; human; PSP94; prostatic inhibin protein; PIP; HSPI; beta-MSP; beta-microseminoprotein; human seminal plasma inhibin; analogue; prosteter secretory protein of 94 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer; benign prostate hyperplasia; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human prostate secretory protein of 94 amino acids PSP94 analogue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New human prostate secretory protein of 94 amino acids, useful inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stom gastrointestinal, breast, endometrial, and ovarian cancers.
                                                                                                                                                                                                            .

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic hinhibin peptide (PTP), human seminal plasma inhibin (HSPI) and betaminoscominoprotein (beta-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention
                                                                                                                                                                                                                                                                           Cancer; human; PSP94; prostatic inhibin protein; PID; HSPI; beta-MSP; bet-microseminoprotein; human seminal plasma inhibin; analogue; prostates secretory protein of 94 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer; benign prostate hyperplasia; cytostatic.
                                                                                                                                                                                                                                           Human prostate secretory protein of 94 amino acids PSP94 analogue #81.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.

WPI; 2002-471401/50.

New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.

Claim 1; Page 74; 185pp; English.

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (BSP1) and becaminorseminoprotein (Dets-MSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

XXS

```
The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (BSP94, also known as prostatic inhibin peptide (PIP), human semilar plasma inhibin (HSPI) and betamineroseminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention
                                                                                                                                           Cancer; human; PSP94; prostatic inhibin protein; PIP; HSPI; beta-MSP; beta-microseminoprotein; human seminal plasma inhibin; analogue; prostate secretory protein of 94 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer; benign prostate hyperplasia; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cancer; human; PSP94; prostatic inhibin protein; PIP; HSPI; beta-MSP; beta-microseminoprotein; human seminal plasma inhibin; analogue; prostetes seretory protein of 34 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer; benign prostate hyperplasia; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human prostate secretory protein of 94 amino acids PSP94 analogue #55.
                                                                                                             Human prostate secretory protein of 94 amino acids PSP94 analogue #6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.

                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to the use of prostate secretory protein-94 (PSP-94; ABR56228) for treating a patient suffering from hypercalcaemia of malignancy. PSP-94 is useful for treating a patient suffering from hypercalcaemia of malignancy arising from carcinomas, prostate and breast cancer. The PSP-94 is also useful for reducing parathyroid hormone related peptide (PTHrP) levels in a patient in need and reducing the development of Skeletal metastasis. The PSP-94 is also used for the manufacture of a pharmaceutical composition for the treatment of hypercalcaemia of malignancy and/or skeletal metastasis. The present sequence is a peptide fragment of PSP-94, used to illustrate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     breast cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and beta-microseminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of PSH. The present sequence is an analogue of the invention
                                                                                       New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAO17918 standard; peptide; 17 AA.

The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and beta-microseminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of PSH. The

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (RSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and betamiroroseminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or beingin prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. New human prostate secretory protein of 94 amino acids, use inhibiting growth of e.g. tumor, prostatic adenocarcinoma, gastrointestinal, breast, endometrial, and ovarian cancers.

Claim 2; Page 77; 185pp; English

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (BSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and beta-microseminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal acancer, breast acancer, andometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and betamicroseminoprotein (bets-MSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. Kadhim S; Fraser J, Baijal-Gupta M, Panchal CJ, WPI; 2002-471401/50. Garde S,

New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.

Claim 2; Page 95; 185pp; English.

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibits peptide (PIP), human seminal plasma inhibin (HSPI) and betaminoprotein (bets-MSP). The analogues are useful for inhibiting growth of tumours, prostatic adenocarchnoma, stomach or gastrointestinal cancer, breast cancer, andometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.

Claim 2; Page 78; 185pp; English

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and beta microseminoprotein (bets-MSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, endometrial, ovarian or cther cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

## ALIGNMENTS

### beta-microseminoprotein; human seminal plasma inhibin; analogue; prostate secretory protein of 94 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer: \(\cappa^2 = 1\) AAO17965 standard; protein; 64 Human prostate secretory protein of 94 amino acids PSP94 analogue 30-AUG-2002 AAO17965; WO200233090-A2 Homo sapiens. benign prostate hyperplasia; cytostatic (first entry) A

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSP1) and betamicroseminoprotein (bets-MSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The

New human prostate secretory protein of 94 inhibiting growth of e.g. tumor, prostatic gastrointestinal, breast, endometrial, and

amino acids, useful adenocarcinoma, stom

seful for stomach,

ovarian

cancers.

                                                                                                                                                                                                                             The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (FIP), human seminal plasma inhibin (HSPI) and betamicroseminoprotein (bets-MSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is the human PSP94 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New human prostate secretory protein of 94 inhibiting growth of e.g. tumor, prostatic gastrointestinal, breast, endometrial, and

PSP-94 is useful for treating a patient suffering from hypercalcaemia of malignancy arising from carcinomas, prostate and breast cancer. The PSP-94 is also useful for reducing parathyroid hormone related peptide (PTHrP) also useful for reducing and reducing the development of skeletal metastasis. The PSP-94 is also used for the manufacture of a pharmaceutical composition for the treatment of hypercalcaemia of malignancy and/or skeletal metastasis

The analogues are useful for inhibiting growth of tumours, prostatic adenoarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 102 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  prostate and breast cancer. The PSP-94 is also useful for reducing parathyroid hormone related peptide (PTH:F) levels in a patient in need and reducing the development of skeletal metastasis. The PSP-94 is also used for the manufacture of a pharmaceutical composition for the treatment of hypercalcaemia of malignancy and/or skeletal metastasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to the use of prostate secretory protein-94 (PSP-94; the present sequence) for treating a patient suffering from hypercalcaemia of malignancy. PSP-94 is useful for treating a patient suffering from hypercalcaemia of malignancy arising from carcinomas, prostate and breast cancer. The PSP-94 is also useful for reducing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Use of prostate secretory protein-94 for treating hypercalcemia of malignancy and reducing skeletal metastasis arising from carcinomas, prostate and breast cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Page 35-36; 61pp; English.

The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 200

Example 3; SEQ ID NO 236; 107pp; English

CC involved in increasing haematopolesis, stem cell survival, bone growth complylaxis or treatment of one or more cancers. (II) is also useful for creating transgeric animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides. (II) induces the proliferation of neural cells and regeneration of nerve and brain tissue and is useful for the treatment of central and companies, such as Alzheimer's, parkinson's disease, Huntington's disease, and amyotrophic lateral companies, regulation of haematopolesis and is useful for the treatment of central and contivity, regulation of haematopolesis and is useful for treating myeloid collymphoid cell disorders, platelet disorders such as thrombocytopenia and for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, and in tissue repair, healing of burns, incisions, ulcers, for treating osteoporosis, osteoarthritis, bone degenerative disorders, corportection or regeneration and treatment of lung or liver fibrosis, accompanies including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis, creatility, metabolism, catabolism, anabolism, storage or elimination of conditions, such as asthma or other respiratory problems. (C dietary fat, lipid, protein, catabolism, anabolism, storage or elimination of commune response. ANUSBOSC-ANUSBOSC regression to raise an immune composition to raise an immune acid semences of the invention. and polynucleotides (II). (I) and (II) are us inflammatory conditions such as arthritis, no ischaemia-reperfusion injury, shock, sepsis, The invention relates to novel isolated human secreted polypeptides (I) (I) and (II) are useful for treating uch as arthritis, nephritis, Crohn's disease immune responses, and

The PSPs and their coding sequences are useful for stimulating an immune response in a patient, or for treating prostate cancer in a patient and for determining, detecting or diagnosing the presence of a cancer in a patient. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New prostate-specific proteins and genes, useful in gene therapy, particularly for stimulating an immune response in a patient, or treating prostate cancer in a patient, as well as for diagnosing prostate cancer.

level indicates that the patient is afflicted with prostate cancer. Nucleic acids of the invention are useful for diagnosing or treating prostate cancer, and may be useful in gene therapy. Sequences given in ADB/5177-ADB/5631 represent marker cDNA and proteins. Note: The sequence data for this patent did not form part of the printed specification, bu was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                 the cancerous state of prostate cells. Also disclosed is a method of assessing whether a patient is afflicted with prostate cancer. The method of the invention involves assessing whether a patient is afflicted with prostate cancer by comparing the level of expression of a marker in a patient sample and the normal level of expression of the marker in a control non-prostate cancer sample, where a significant increase in the level of expression of the marker in the patient sample and the normal
                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to newly discovered cancer markers associated with the cancerous state of prostate cells. Also disclosed is a method of

                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated polypeptide comprising no more than 11-542 amino acids of ADB13563 comprising a sequence ADB1487. The peptides comprise a fragment ADB13563 of that contain naturally processed T-cell epitopes for 3 class I major histocompatibility complex (MHC) allelas. ADB13563 is a polypeptide encoded by a human prostate specific cDNA, one of 648 disclosed as new. Also included are nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated polypeptide for use in a vaccine for stimulating an in response, or for treating or diagnosis cancer, preferably prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Xu J,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            14-JUL-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    prostate cancer in a patient. The present sequence is a prostate specifi protein of the invention. Note: Except where otherwise indicated, the sequence data for this patent did form part of the printed specification, but was obtained in electronic format directly from USPTO at segdata.uspto.gov/sequence.html?DocID=20030185830.
                                         cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       vulnerary; gastrointestinal;
antibacterial; gene therapy;
gastrointestinal; pulmonary;
                                                                                                                  AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AFT The prostate cancer antigens can have neuroprotective, cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 114 AA;
           or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive,

                                                                                                          The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSP1) and betamicroseminoprotein (bets-MSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of entirely and the prostation of the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancers of entirely and the cancer
                                       epithelial secretion, or benign prostate hyperplasia and for tre
patients with a disease characterized by elevated levels of FSH.
present sequence is an analogue of the invention
                                                                                                                                                                                                                                                                                                                          New human prostate secretory protein of 94 amino acids, useful inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stogastrointestinal, breast, endometrial, and ovarian cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                beta-microseminoprotein; human seminal plasma inhibin; analogue; prostate secretory protein of 94 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer;

                                                                                                                                                             The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and betamicroseminoprotein (bets-MSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

The preparation can also be used to treat patients with diseases characterised by elevated levels of follicle stimulating hormone (FSH). The PIP and its analogues inhibit tumour growth and desrease FSH levels without adversely affecting testosterone levels. (Updated on 25-WAR-2003 to correct PN-field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Prostatic inhibin peptide; cancer; adenocarcinoma; breast cancer; hyperplasia; PIP; follicle stimulating hormone; FSH; tumour; inhibition; prostate cancer; gastrointestinal tract.

                                                                                                                                                                                         The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and beta-microseminoprotein (bets-MSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   beta-microseminoprotein; human seminal plasma inhibin; analogue; prostate secretory protein of 94 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer; benign prostate hyperplasia; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human prostate secretory protein of 94 inhibiting growth of e.g. tumor, prostatic gastrointestinal, breast, endometrial, and

New human prostate secretory protein of 94 amino acids, useful inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stongastrointestinal, breast, endometrial, and ovarian cancers. seful for stomach,

Claim 2; Page 104; 185pp; English.

The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSP1) and betaminoprotein (bets-MSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal growth of tenocer, endometrial overian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention

The preparation can also be used to treat patients with diseases characterised by elevated levels of follicle stimulating hormone (FSH). The PIP and its analogues inhibit tumour growth and desrease FSH levels without adversely affecting testosterone levels. (Updated on 25-MAR-2003 to correct pN field.)

                                                         Human; cytostatic; prostate secretory protein-94; PSP-94; hypercalcaemia of malignancy; carcinoma; prostate cancer; breast cancer; parathyroid hormone related peptide; PTHrP; skeletal metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PTP), human seminal plasma inhibin (HSPI) and betamicroseminoprotein (bets-MSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is the human PSP94 protein
                                                                                                                     Native Human prostate secretory protein-94 (PSP-94).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human prostate secretory protein of 94 inhibiting growth of e.g. tumor, prostatic gastrointestinal, breast, endometrial, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the use of prostate secretory protein-94 (PSP-94; the present sequence) for treating a patient suffering from hypercalcaemia of malignancy. PSP-94 is useful for treating a patient suffering from hypercalcaemia of malignancy arising from carcinomas, prostate and breast cancer. The PSP-94 is also useful for reducing parathyroid hormone related peptide (PTHPP) levels in a patient in need and reducing the development of skeletal metastasis. The PSP-94 is also used for the manufacture of a pharmaceutical composition for the treatment of hypercalcaemia of malignancy and/or skeletal metastasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Use of prostate secretory protein-94 for tre
malignancy and reducing skeletal metastasis
prostate and breast cancers.

metastasis.
                                                                                                                                                                                                   cancer;
```

The present invention relates to the use of prostate secretory protein-94 (PSP-94; the present sequence) for treating a patient suffering from hypercalcaemia of malignancy. PSP-94 is useful for treating a patient suffering from hypercalcaemia of malignancy arising from carcinomas, prostate and breast cancer. The PSP-94 is also useful for reducing parathyroid hormone related peptide (PTHrP) levels in a patient in need and reducing the development of skeletal metastasis. The PSP-94 is also used for the manufacture of a pharmaceutical composition for the treatment of hypercalcaemia of malignancy and/or skeletal metastasis

Use of prostate secretory protein-94 for treating hypercalcemia malignancy and reducing skeletal metastasis arising from carcino

carcinomas,

                                                                                                                                        The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or poly4+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI;

CC ischaemia-reprinsion injury, shock, sepsis, immune responses, and is involved in increasing haematopoiesis, stem cell survival, bone growth cc and remodeling. (I), (II) and modulators of (II) are useful for cc and remodeling. (II) and modulators of (II) are useful for cc prophylaxis or treatment of one or more cancers. (II) is also useful for creating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides. (CI) induces the proliferation of neural cells and regeneration of nerve creating or the prolypeptides. (CI) induces the proliferation of neural cells and regeneration of nerve creating or the prolypeptides. (CI) induces the proliferation of neuropathies, such as Alzheimer's, cardinates, huntington's disease, and amyotrophic lateral creating of sisease, Huntington's disease, and amyotrophic lateral creating coll disease, platelet disorders such as thromboytopenia cardivity, regulation of haematopoiesis and is useful for treating myeloid cor lymphoid cell disorders, platelet disorders such as thromboytopenia creatise growth, and in tissue repair, healing of burns, incisions, ulcers, cor periodontal disease. Furthermore, (I) is also useful for gut creating osteoporosis, osteoarthritis, bone degenerative disorders, cor periodontal disease. Furthermore, (I) is also useful for gut creating osteoporosis, osteoarthritis, bone degenerative disorders, cor periodontal disease. Furthermore, (I) is also useful for gut consisted in a continual continual continual continual deficiencies and continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continual continua
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel polypeptides and nucleic acids obtained from cDNA libraries prepared from various human tissues, for diagnosis and treatment cancer, neurological, inflammatory, and autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            07-MAR-2000; 2000US-00519705.

                                                     The present invention relates to novel prostate-specific proteins (PSP) and their coding sequences. The PSPs and their coding sequences are useful for stimulating an immune response in a patient, or for treating prostate cancer in a patient and for determining, detecting or diagnosing the presence of a cancer in a patient. The present sequence was used to illustrate the invention
                                                                                                                                                               New prostate-specific proteins and genes, useful in gene therapy, particularly for stimulating an immune response in a patient, or treating prostate cancer in a patient, as well as for diagnosing prostate cancer
                                                                                                                                                                                                                                                                                                                          09-MAY-2001; 2001US-00852911

                      prostate cancer by comparing the level of expression of a marker in a patient sample and the normal level of expression of the marker in a control non-prostate cancer sample, where a significant increase in the level of expression of the marker in the patient sample and the normal level indicates that the patient is afflicted with prostate cancer. Nucleic acids of the invention are useful for diagnosing or treating prostate cancer, and may be useful in gene therapy. Sequences given in ADB7517-ADB75631 represent marker cDNA and proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                           Schlegel

The invention relates to an isolated polypeptide comprising no more than 11-542 amino acids of ADB13563 comprising a sequence ADB14487. The peptides comprise a fragment ADB13563 of that contain naturally processed T-cell epitopes for 3 class I major histocompatibility complex (MHC) alleles. ADB13563 is a polypeptide encoded by a human prostate specific CDNA, one of 648 disclosed as new. Also included are nucleic acids encoding the proteins and peptides, expression vectors, a host cell transformed with the vector, an isolated antibody (or antigen binding fragment) that specifically binds to the protein or peptide, detecting

The peptides (or an oligonucleotide that hybridises to nucleic acid encoding them), is used to detect the presence of cancer in a patient. The peptides, nucleic acid, see used to stimulate or expand T cells expressing the nucleic acid, are used to stimulate or expand T cells specific for a tumour protein. The peptides, nucleic acid, are used to stimulate an immune response or treat presenting cells are used to stimulate an immune response or treat prostate cancer in a patient. The present sequence is a prostate specific sequence data for this patent did not form part of the printed specific sequence data for this patent did not form part of the printed specific specification, but was obtained in electronic format directly from USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the presence of a cancer in a patient (comprising contacting a patient sample with a binding agent that binds to the peptides or a polypeptide appearing as ADB1358, detecting the amount of polypeptide that binds to the agent and comparing the amount of polypeptide to a predetermined cutoff value to determine the presence of cancer), a fusion protein comprising the peptides or proteins, stimulating or expanding T cells specific for a tumour protein comprising contacting T cells with the peptides or the isolated T cell population, treating prostate cancer in a patient comprising administering a composition comprising the peptides, and the peptides of the peptides or the solated T cell population.
                                                                                        Sequence 114 AA;

Prostate cancer associated gene antigens, useful for treatment, such as prostate cancer.

sequences, referred to as prevention, and diagnosis

prostate can of disorders

cancer

proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF1656 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present

AAF15566 to AAF16505 encode the human prostate cancer associated

                                    The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostat inhibin peptide (PIP), human seminal plasma inhibin (HSP1) and be microseminoprotein (bets-MSP)). The analogues are useful for inhi growth of tumours, prostatic adenocarcinoma, stomach or gastroint cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for trea patients with a disease characterized by elevated levels of FSH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and beta-
microseminoprotein (bets-MSP). The analogues are useful for inhibitin
growth of tumours, prostatic adenocarcinoma, stomach or gastrointestin
cancer, breast cancer, endometrial, ovarian or other cancers of
epithelial secretion, or benign prostate hyperplasia and for treating
patients with a disease characterized by elevated levels of FSH. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to analogues of the human prostate secretory protein of 94 amino acids (PSP94, also known as prostatic inhibin peptide (PIP), human seminal plasma inhibin (HSPI) and betamicroseminoprotein (bets-MSP)). The analogues are useful for inhibiting growth of tumours, prostatic adenocarcinoma, stomach or gastrointestinal cancer, breast cancer, endometrial, ovarian or other cancers of epithelial secretion, or benign prostate hyperplasia and for treating patients with a disease characterized by elevated levels of FSH. The present sequence is an analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cancer; human; PSP94; prostatic inhibin protein; PIP; HSPI; beta-MSP; beta-microseminoprotein; human seminal plasma inhibin; analogue; prostate secretory protein of 94 amino acids; prostatic adenocarcinoma; stomach cancer; breast cancer; endometrial cancer; ovarian cancer; benign prostate hyperplasia; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New human prostate secretory protein of 94 amino acids, useful for inhibiting growth of e.g. tumor, prostatic adenocarcinoma, stomach, gastrointestinal, breast, endometrial, and ovarian cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 42 AA;
